

CS 8803/4803 Sociotechnical Security

Reading Response

Georgia Tech, Fall 2026

Due: Each class day (Monday and Wednesday) at 2:00 PM on Gradescope

The goal of a reading response is to help you think critically about the readings and prepare for discussion with your peers and/or invited speakers. Responses are not meant to be just a summary of the work. No late reading responses will be accepted. You **may not** use generative AI tools to prepare your reading response, except to check spelling/grammar.

What you will do:

- Read all assigned articles.
- For each assigned reading, write a 1-2 paragraph response that includes the following:
 - A brief description of the paper's motivations & goals.
 - A description of the paper's strengths (e.g., ways in which the paper's results push the field, strong methodology, novel approach, etc).
 - A description of the paper's weaknesses (e.g. something you disagree with, arguments you think are poorly supported by evidence, etc).
 - Three discussion points/questions you'd like to ask your peers and/or invited speakers. These points/questions should spark discussion and should not have an obvious or straightforward answer.

Your response for your selected reading can address the following topics (but not all are required for a strong submission):

- **Contribution:** why the reading does/doesn't seem important
- **Methodology:** why the methodology is effective/novel/questionable/...
- **Argumentation:** why the reading is/isn't effective at getting its message across
- **Personal impact:** how the reading has changed your opinion or outlook on a topic
- **Future discussion:** what does this reading make you want to further discuss
- **Professional impact:** how applicable is the reading to sociotechnical research and/or trust and safety as a profession?

What you will submit:

Submit a single document containing your reading response to Gradescope.

How you will be graded:

- Whether your response has all required components
- Whether your response shows an understanding of the main ideas of the readings and your own creative insights on the readings.
- Strength of discussion points and questions
- Quality of reflection and writing

Acknowledgements: This assignment was inspired by the reading response assignment for UC Santa Cruz HCI 220 and HCI 200 and Stanford CS 347.
