

CS 8803/4803 Sociotechnical Security

Leading Discussion Presentation

Georgia Tech, Fall 2026

Due: Submit your presentation slides on Gradescope by 2:00 PM three business days before your presentation. For example, if you are presenting on a Monday, submit by Wednesday of the previous week. If you are presenting on a Wednesday, submit by Friday of the previous week.

Students will be assigned to lead the discussion for two class sessions throughout the quarter.

What you will do:

When it is your turn to lead the discussion on the assigned readings, you must do the following:

- Read the assigned papers in depth. If there is more than one paper assigned that day, select one you want to focus on for the presentation. If there is just one paper assigned, your presentation will focus on that paper.
- Create a 15 minute presentation that details the paper's study motivation, research questions, methodological approach, and key results. The goal of the presentation is to facilitate a discussion. Therefore, in addition to summarizing the points above, devote at least 5 minutes of your presentation to discussing how the paper advances the field of sociotechnical security and what gaps/questions remain unanswered.
- Prepare 5 discussion questions. These questions should situate themselves in the context of the broader work in the area and, ideally, engage with bigger ideas in the class.
- Send Veronica the presentation and discussion questions at least 3 business days in advance and incorporate her feedback before presenting.

You **may not** use generative AI tools to prepare your presentation and discussion questions, except to check spelling/grammar.

What you will submit:

Submit your presentation slides with your five discussion questions on Gradescope. Veronica will provide feedback at least 24 hours before the presentation that you must incorporate before you present. Mostly, her feedback will be on the structuring/ordering of the questions, and potentially asking for more context or a deeper version of each question.

How you will be graded:

Your grade will be determined by the timeliness of your presentation submission, the clarity of your presentation, your incorporation of Veronica's feedback, and how well you lead the discussion with your peers.

Acknowledgements: This assignment was inspired by a similar assignment in UCSD's Sociotechnical Cybersecurity and NYU's Trust and Safety courses.
